

Edgewell Ingredient Principles

We care about your safety, which is why we carefully select ingredients and only formulate products that meet, or exceed, standards for safety, effectiveness and quality around the world.

We follow EPC principles that are based on scientific definitions for the safe use of ingredients and the standards from major regulatory agencies around the world, so you can continue to feel confident and trust that our products are safe.

Our product stewardship also includes listening to our consumers and retailers avoiding animal testing whenever possible and being transparent in our labeling.

- **Safe Use:** All ingredients must be safe for consumers when used properly and must be backed with current science that supports their safe use.
- **Quality:** We ensure our ingredients are safe, efficacious and meet our quality standards before we use them.
- **Regulations and Standards:** All ingredients must meet government safety regulations and internal safety standards and, as appropriate, reflect guidance from credentialed scientific advisory organizations.
- **Alternatives/Formulation Changes:** As part of our Ingredient Stewardship process we monitor and evaluate emerging science and look at opportunities to reformulate products to provide our customers with a variety of choices that meets their preference and is informed by emerging science. We will work to ensure consistency with newly acquired brands in the shortest amount of time possible.
- **Consumer Choice:** We formulate our products to meet both the needs and preferences of consumers, recognizing they benefit from having a range of options.
- **Retailers and Partner Voice:** We work closely with retailers and partners to ensure we consider their standards, sustainability goals, recognizing they anticipate regulations, embrace the wide consumer behavior and raising consumer trends.
- **Transparency:** The ingredients we use are clearly listed on the labels of our products in accordance with regulatory guidance.
- **Animal Testing:** Our products are not tested on animals unless required by government regulations.
- **The Environment:** We consider and continually assess new information that becomes available and strive to minimize the environmental impact of our ingredient use. We look at opportunities to reformulate products to meet evolving customer and consumer needs.

These principles will be reviewed annually and updated, as necessary.
